PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of experience architecting high-availability AWS infrastructure, orchestrating EKS-based microservices, automating CI/CD pipelines, and managing Infrastructure as Code with Terraform. Skilled in Kubernetes observability, Prometheus/PromQL monitoring, AI-assisted infrastructure reporting, automated patch management, and deployment optimization to improve reliability, visibility, and MTTR.

TECHNICAL SKILLS

- **Cloud:** AWS (VPC, EC2, IAM, ALB,NLB, EKS, ECR, Route53, S3, CloudWatch)
- **Containers & Kubernetes:** Kubernetes, Docker, Helm, EKS, Kubernetes Ingress
- **Infrastructure as Code:** Terraform (remote state, S3/DynamoDB backend, modules)
- **CI/CD:** Jenkins, GitHub Actions, Argo CD, GitOps, Maven
- **Configuration Management:** Ansible (playbooks, server patching, environment automation)
- **Observability:** Prometheus, Grafana, CloudWatch, ELK, alerting & dashboards
- **Scripting:** Python, Shell/Bash
- **Version Control:** Git, GitHub, GitLab (branching strategies, webhooks, Git best practices)

EXPERIENCE

DevOps Engineer | Tecnotree Convergence Limited

Aug 2023 – Present | Bengaluru

- Designed and maintained **Jenkins** and **GitHub Actions** CI/CD pipelines for Java applications, automating build, test, and containerized deployments to **Kubernetes**.
- Architected and managed **AWS EKS clusters** to host containerized microservices using Helm, Deployments, StatefulSets, Ingress, ConfigMaps, and Secrets across Staging and Production environments.
- Provisioned and managed scalable **AWS infrastructure (VPC, EC2, IAM, ALB, Route53, S3)** using Terraform, Ansible, Bash, and Python, improving environment consistency.
- Implemented monitoring, logging, and alerting using **Prometheus, Grafana, ELK Stack**, and AWS CloudWatch for proactive incident detection.
- Administered Linux-based production environments, handling infrastructure troubleshooting, log analysis, and performance optimization.
- Automated Linux OS patch management across **20+ production servers** using Ansible playbooks, reducing execution time from several hours to **under 25 minutes**.

PROJECT

Kubernetes Cluster Monitoring with AI | [GitHub](#)

- Built an AI Kubernetes monitoring tool executing 24+ PromQL queries across node health, pod status, CPU/memory, disk usage, and network metrics, summarizing insights via Google Gemini and alerting via email.

KEY ACHIEVEMENTS

- **Excellence Award (Sep 2025):** Honored for exceptional performance in enhancing system reliability and automation.
- **Go-Live Award (Aug 2024):** Recognized for outstanding contributions to successful project deployment and operational readiness.

EDUCATION

B. Tech, Computer Science and Engineering – Annamacharya Institute of Technology and Sciences

2018 – 2022
